Introduction

A home service application developed with Flutter is a mobile platform solution that connects users with various home services, such as plumbing, electrical work, cleaning, and more. The application typically serves as a marketplace where users can find and hire local service providers based on their needs. Service providers, in turn, can use the app to offer their services, manage appointments, and connect with potential clients.

Challenges & Interesting points

-> It took a lot of time where, we tried to understand an outdated library to understand the tutorial.

-> rendering image is also another challenge we faced and we are able to resolve that issue also.

-> working with flutter for the first time.

-> Implementation on different platforms.

Thank you
